EDUCATION

- IIIT Bhagalpur (CGPA: 7.01)** Aug 2018 – Jun 2022
B.Tech, Computer Science and Engineering Bhagalpur, India

SKILLS SUMMARY

- AI/LLM Skills:** LLMs, RLHF, SFT, LLM Evaluation, Single-turn Evaluation, Multi-turn Evaluation, Pairwise Ranking, Prompt Engineering, AI Annotation, Reward Modeling, Response Evaluation, Code Evaluation
- Languages:** Python, PHP, C++, JavaScript, SQL
- Frontend:** HTML, CSS, Bootstrap
- Backend:** Django, CodeIgniter, Laravel
- Tools:** Git, GitHub, Hugging Face, MySQL, SQLite, Docker, VS Code

EXPERIENCE

- Turing Enterprises Inc** Remote
LLM Python Engineer Sep 2024 – Present
 - Evaluated 1,000+ AI-generated coding responses across Python, Django, JavaScript, PHP, SQL, and CodeIgniter using RLHF/SFT workflows in both single-turn and multi-turn conversations. Assessed outputs for instruction following, accuracy, truthfulness, code executability, safety, and overall response quality.
 - Performed pairwise response ranking, preference annotation, and detailed justification writing to support reward model training and LLM alignment.
 - Conducted process supervision on multi-step reasoning chains by identifying logical errors, evaluating reasoning quality, and writing structured critiques to improve model self-correction.
 - Authored ideal responses by refining AI-generated outputs for correctness, clarity, and completeness. Executed and validated Python code in sandboxed environments (Replit/Google Colab) and provided structured feedback on debugging logic, code quality, and real-world software engineering scenarios.
- Verto India** Noida, Uttar Pradesh
Software Developer Oct 2022 – Sep 2024
 - Developed full-stack web applications using HTML, CSS, JavaScript, PHP, SQL, and CodeIgniter, delivering production-ready features across multiple client projects
 - Built authentication, dashboard, and admin management modules used in production environments
 - Designed and optimized SQL database schemas and queries, improving data integrity and application performance
 - Improved backend performance and resolved UI/UX issues, contributing to stable, scalable feature delivery under strict deadlines

PROJECTS

- LLM Alignment Pipeline using SFT and Reward-Based Response Optimization:** Built an end-to-end LLM alignment workflow using a GPT-based model. Performed Supervised Fine-Tuning (SFT) on instruction-following data and implemented reward-based response evaluation to simulate Reinforcement Learning from Human Feedback (RLHF). Designed a loop to generate multiple model responses, score them using a learned reward model, and select the best outputs for alignment purposes. Gained hands-on experience in LLM fine-tuning, alignment strategies, and ethical response optimization. Tech: Python, Large Language Models (LLM), SFT, RLHF, Reward Modeling.
- E-commerce Website:** Developed a dynamic e-commerce platform using HTML, CSS, JavaScript, PHP (CodeIgniter), and SQL. Implemented core functionalities like product browsing, cart management, and secure checkout. Integrated an intuitive admin panel for effortless product management. Ensured scalability and robustness to handle increasing product inventories and user traffic. Enhanced user experience with responsive design for optimal performance across devices. Utilized SQL for efficient database management, ensuring data integrity and security. Tech: HTML, CSS, JavaScript, PHP, CodeIgniter, SQL.
- Hospital Management System:** Designed and implemented a web-based Hospital Management System using HTML, CSS, Python with the Django framework, and SQLite database, streamlining administrative tasks and achieving a 30% reduction in workload through automation, while providing real-time access to critical patient and doctor information. Tech: HTML, CSS, Python (Django), SQLite.
- Weather-Data-Emailer:** Developed a web application to deliver real-time weather updates via email using HTML, CSS, JavaScript, and PHP (CodeIgniter). Implemented dynamic data retrieval from a weather API, automated email notifications with PHP Mailer, and created a responsive, user-friendly interface. Enhanced interactivity and responsiveness with jQuery, ensuring reliable weather updates and seamless user experience. Tech: HTML, CSS, JavaScript, PHP (CodeIgniter), jQuery.

CERTIFICATES

- SQL and Relational Databases:** Big Data University (2020)
- Python:** Coursera (Google) – 2020
- Web Development:** Coursera UC-Davis – 2020
